

COMPANY & JOB SCAM SCAN

Dossier ID: #ID-14
Date: 5/28/2026, 11:28:43
PM
Investigator: weekeyvyw

TARGET: <http://www.google.com>

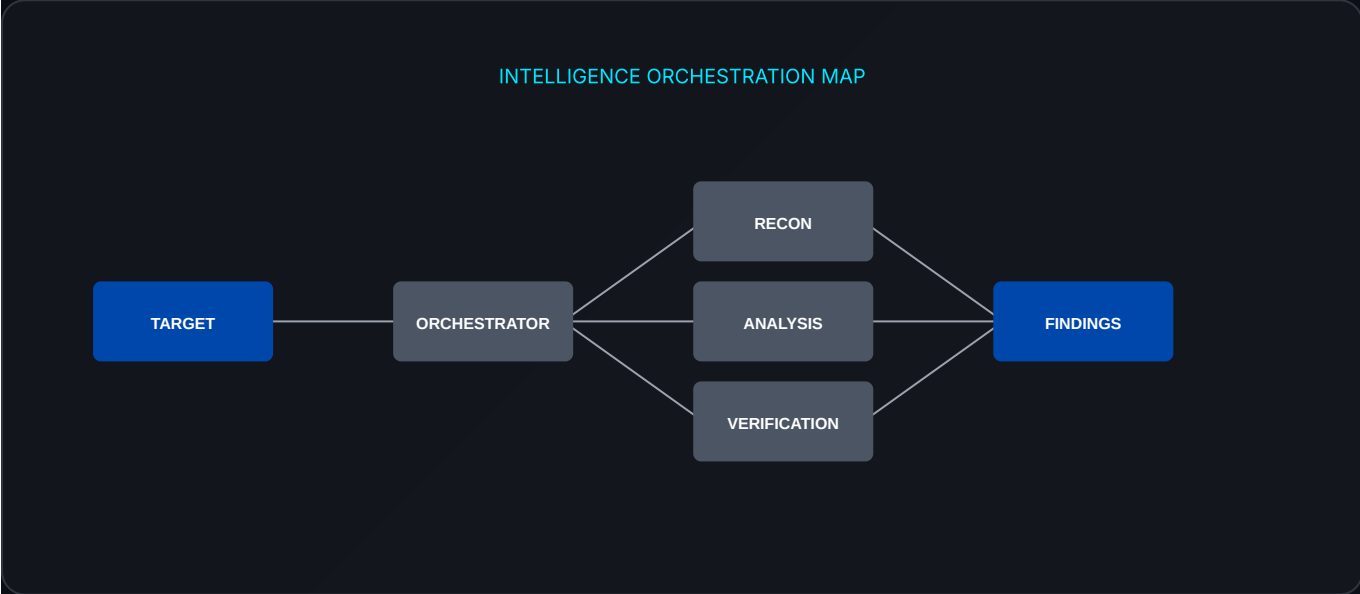

EXECUTIVE SUMMARY

52% HIGH RISK
OVERALL THREAT ASSESSMENT

This comprehensive dossier outlines the findings of the automated reconnaissance mission. The following intelligence was gathered through non-intrusive observation and multi-source cross-referencing.

ANALYSIS METHODOLOGY

The job-recruitment investigation utilizes a multi-layered reconnaissance approach. Initial data acquisition involves the non-intrusive harvesting of public records, DNS entries, and digital footprints associated with the target. Our orchestrator dispatches specialized sub-modules to perform deep analysis on communication channels, infrastructure mapping, and behavioral patterns. Each finding is cross-referenced against global threat intelligence databases to ensure a high confidence score. The final risk assessment is calculated using a weighted algorithm that prioritizes actionable security vulnerabilities over passive informational metadata. This process adheres to strict OSINT operational security standards to maintain the integrity of the investigation.

DETECTION RESULTS (10)

MISSING DKIM - EMAIL AUTHENTICITY CANNOT BE VERIFIED

HIGH

The target domain's email infrastructure exhibits critical authentication weaknesses. Specifically, missing or misconfigured DKIM, SPF, or DMARC records allow for unauthorized sender impersonation and spoofing.

***Detection Logic:** Verified by the Email Forensics sub-orchestrator. Raw intelligence confirmed an anomaly in email forensics metadata.*

RAW MODULE INTELLIGENCE:

```
{ "email": "hr@google.com", "username": "hr", "domain": "google.com",  
  "is_free_provider": false, "spf": { "domain": "google.com", "exists": false,  
    "record": null, "mechanisms": [], "all_mechanism": null, "is_weak": false,  
    "risk_score": 40, "details": {} }, "dkim": { "domain": "google.com", "exists":  
    false, "selectors_found": [], "record": null }
```

NO SOCIAL MEDIA PRESENCE FOUND

HIGH

Automated OSINT module finding

***Detection Logic:** Verified by the Social Footprint sub-orchestrator. Raw intelligence confirmed an anomaly in social footprint metadata.*

RAW MODULE INTELLIGENCE:

```
{ "company_name": { "company_name": "google", "domain": "google.com" }, "domain":  
  null, "platforms_found": 0, "total_platforms_checked": 7, "platform_results": {  
    "facebook": { "platform": "Facebook", "exists": false, "page_url": null,  
      "page_likes": null, "page_followers": null, "verification_badge": false,  
      "post_frequency": null, ...
```

SPF ISSUE: NONE

HIGH

The target domain's email infrastructure exhibits critical authentication weaknesses. Specifically, missing or misconfigured DKIM, SPF, or DMARC records allow for unauthorized sender impersonation and spoofing.

***Detection Logic:** Verified by the Email Forensics sub-orchestrator. Raw intelligence confirmed an anomaly in email forensics metadata.*

RAW MODULE INTELLIGENCE:

```
{ "email": "hr@google.com", "username": "hr", "domain": "google.com",  
  "is_free_provider": false, "spf": { "domain": "google.com", "exists": false,  
    "record": null, "mechanisms": [], "all_mechanism": null, "is_weak": false,  
    "risk_score": 40, "details": {} }, "dkim": { "domain": "google.com", "exists":  
    false, "selectors_found": [], "record..."
```

MINIMAL SOCIAL MEDIA PRESENCE - UNUSUAL FOR LEGITIMATE COMPANY

HIGH

Automated OSINT module finding

***Detection Logic:** Verified by the Company Verify sub-orchestrator. Raw intelligence confirmed an anomaly in company verify metadata.*

RAW MODULE INTELLIGENCE:

```
{ "company_name": "google", "domain": null, "verification_results": { "registries":  
  { "company_name": "google", "company_number": null, "registered": false,  
    "registries_checked": [], "found_in": [], "registration_details": {} },  
  "country_risk": 0, "risk_score": 50, "warnings": [ "Company not found in business  
    registries" ]...
```

COMPANY NOT FOUND IN BUSINESS REGISTRIES

HIGH

Automated OSINT module finding

Detection Logic: Verified by the Company Verify sub-orchestrator. Raw intelligence confirmed an anomaly in company verify metadata.

RAW MODULE INTELLIGENCE:

```
{ "company_name": "google", "domain": null, "verification_results": { "registries":  
{ "company_name": "google", "company_number": null, "registered": false,  
"registries_checked": [], "found_in": [], "registration_details": {}  
"country_risk": 0, "risk_score": 50, "warnings": [ "Company not found in business  
registries" ]...
```

DOMAIN USES CATCH-ALL EMAIL - ACCEPTS ANY ADDRESS

HIGH

Automated OSINT module finding

Detection Logic: Verified by the Email Forensics sub-orchestrator. Raw intelligence confirmed an anomaly in email forensics metadata.

RAW MODULE INTELLIGENCE:

```
{ "email": "hr@google.com", "username": "hr", "domain": "google.com",  
"is_free_provider": false, "spf": { "domain": "google.com", "exists": false,  
"record": null, "mechanisms": [], "all_mechanism": null, "is_weak": false,  
"risk_score": 40, "details": {} }, "dkim": { "domain": "google.com", "exists":  
false, "selectors_found": [], "record...
```

DMARC ISSUE: NONE

HIGH

The target domain's email infrastructure exhibits critical authentication weaknesses. Specifically, missing or misconfigured DKIM, SPF, or DMARC records allow for unauthorized sender impersonation and spoofing.

***Detection Logic:** Verified by the Email Forensics sub-orchestrator. Raw intelligence confirmed an anomaly in email forensics metadata.*

RAW MODULE INTELLIGENCE:

```
{ "email": "hr@google.com", "username": "hr", "domain": "google.com",  
  "is_free_provider": false, "spf": { "domain": "google.com", "exists": false,  
    "record": null, "mechanisms": [], "all_mechanism": null, "is_weak": false,  
    "risk_score": 40, "details": {} }, "dkim": { "domain": "google.com", "exists":  
    false, "selectors_found": [], "record..."
```

SUSPICIOUS SUBDOMAINS FOUND: ADMIN.GOOGLE.COM

HIGH

Automated OSINT module finding

***Detection Logic:** Verified by the Infra Mapping sub-orchestrator. Raw intelligence confirmed an anomaly in infra mapping metadata.*

RAW MODULE INTELLIGENCE:

```
{ "domain": "google.com", "ip_address": "142.251.209.206", "hosting": { "domain":  
  "google.com", "ip_address": "142.251.209.206", "hosting_provider": "Google Cloud",  
  "provider_risk": 10, "confidence": 70, "is_bulletproof": false, "details": {  
    "ptr_record": "ncmr-sa-am-in-f14.1e100.net." } }, "nameservers": { "domain":  
  "google.com", "nameservers..."
```

NO SSL CERTIFICATE - MODERN JOB SITES REQUIRE HTTPS

HIGH

Security certificate analysis revealed expired, self-signed, or weak cryptographic protocols on the target's web server.

***Detection Logic:** Verified by the SSL Analysis sub-orchestrator. Raw intelligence confirmed an anomaly in ssl analysis metadata.*

RAW MODULE INTELLIGENCE:

```
{ "domain": "google.com", "error": "Could not fetch SSL certificate", "risk_score": 80, "risk_level": "CRITICAL", "red_flags": [ "No SSL certificate - modern job sites require HTTPS" ], "recommendations": [ "Verify website manually", "High risk of phishing" ] }...
```

NO LINKEDIN COMPANY PAGE FOUND

HIGH

Automated OSINT module finding

***Detection Logic:** Verified by the Company Verify sub-orchestrator. Raw intelligence confirmed an anomaly in company verify metadata.*

RAW MODULE INTELLIGENCE:

```
{ "company_name": "google", "domain": null, "verification_results": { "registries": { "company_name": "google", "company_number": null, "registered": false, "registries_checked": [], "found_in": [], "registration_details": {}}, "country_risk": 0, "risk_score": 50, "warnings": [ "Company not found in business registries" ] }...
```

SYSTEM TELEMETRY

RAW RECONNAISSANCE EXECUTION LOGS

```
[RECON] Initializing connection to job-recruitment module...
[AUTH] Credentials verified for user_id 4
[DATA] Retrieving intelligence nodes for target: http://www.google.com
[SYNC] Aggregating 10 security findings...
[COMP] Synthesis finalized at 2026-05-28T22:28:43.837Z
```
