## Investigation Briefing

This comprehensive dossier outlines the findings of the automated reconnaissance mission. The following intelligence was gathered through non-intrusive observation and multi-source cross-referencing.

# 02. THREAT LANDSCAPE & DISTRIBUTION

|            |          |
|------------|----------|
| ● Critical | findings |
| ● High     | findings |
| ● Medium   | findings |
| ● Low      | findings |

The distribution above highlights the critical path of the investigation. Priority should be given to **Critical** and **High** severity findings.

# 03. ANALYSIS METHODOLOGY

The job-recruitment investigation utilizes a multi-layered reconnaissance approach. Initial data acquisition involves the non-intrusive harvesting of public records, DNS entries, and digital footprints associated with the target. Our orchestrator dispatches specialized sub-modules to perform deep analysis on communication channels, infrastructure mapping, and behavioral patterns. Each finding is cross-referenced against global threat intelligence databases to ensure a high confidence score. The final risk assessment is calculated using a weighted algorithm that prioritizes actionable security vulnerabilities over passive informational metadata. This process adheres to strict OSINT operational security standards to maintain the integrity of the investigation.

## 04. DETAILED INTELLIGENCE DETECTIONS

### Missing DKIM - email authenticity cannot be verified

HIGH

The target domain's email infrastructure exhibits critical authentication weaknesses. Specifically, missing or misconfigured DKIM, SPF, or DMARC records allow for unauthorized sender impersonation and spoofing.

IDENTIFICATION LOGIC

Verified by the Email Forensics sub-orchestrator. Raw intelligence confirmed an anomaly in email forensics metadata.

SOURCE TYPE

OSINT Public Intelligence

STRATEGIC REMEDIATION

```
{
  "email": "hr@google.com",
  "username": "hr",
  "domain": "google.com",
  "is_free_provider": false,
  "spf": {
    "domain": "google.com",
    "exists": false,
    "record": null,
    "mechanisms": [],
    "all_mechanism": null,
    "is_weak": false,
    "risk_score": 40,
    "details": {}
  },
  "dkim": {
    "domain": "google.com",
    "exists": false,
    "selectors_found": [],
    "record..."
  }
}
```

Automated OSINT module finding

IDENTIFICATION LOGIC

Verified by the Social Footprint sub-orchestrator. Raw intelligence confirmed an anomaly in social footprint metadata.

SOURCE TYPE

OSINT Public Intelligence

STRATEGIC REMEDIATION

```
{
  "company_name": {
    "company_name": "google",
    "domain": "google.com"
  },
  "domain": null,
  "platforms_found": 0,
  "total_platforms_checked": 7,
  "platform_results": {
    "facebook": {
      "platform": "Facebook",
      "exists": false,
      "page_url": null,
      "page_likes": null,
      "page_followers": null,
      "verification_badge": false,
      "post_frequency": null,
      ...
    }
  }
}
```

The target domain's email infrastructure exhibits critical authentication weaknesses. Specifically, missing or misconfigured DKIM, SPF, or DMARC records allow for unauthorized sender impersonation and spoofing.

IDENTIFICATION LOGIC

Verified by the Email Forensics sub-orchestrator. Raw intelligence confirmed an anomaly in email forensics metadata.

    "record..."
  }
}
```

Automated OSINT module finding

IDENTIFICATION LOGIC

Verified by the Infra Mapping sub-orchestrator. Raw intelligence confirmed an anomaly in infra mapping metadata.

SOURCE TYPE

OSINT Public Intelligence

STRATEGIC REMEDIATION

```
{
  "domain": "google.com",
  "ip_address": "142.251.209.206",
  "hosting": {
    "domain": "google.com",
    "ip_address": "142.251.209.206",
    "hosting_provider": "Google Cloud",
    "provider_risk": 10,
    "confidence": 70,
    "is_bulletproof": false,
    "details": {
      "ptr_record": "ncmr-sa-am-in-f14.1e100.net."
    }
  },
  "nameservers": {
    "domain": "google.com",
    "nameservers..."
  }
}
```

Security certificate analysis revealed expired, self-signed, or weak cryptographic protocols on the target's web server.

IDENTIFICATION LOGIC

Verified by the SSL Analysis sub-orchestrator. Raw intelligence confirmed an anomaly in ssl analysis metadata.

SOURCE TYPE

OSINT Public Intelligence

STRATEGIC REMEDIATION

```
{
  "domain": "google.com",
  "error": "Could not fetch SSL certificate",
  "risk_score": 80,
  "risk_level": "CRITICAL",
  "red_flags": [
    "No SSL certificate - modern job sites require HTTPS"
  ],
  "recommendations": [
    "Verify website manually",
    "High risk of phishing"
  ]
}...
```

CONFIDENTIAL

Automated OSINT module finding

**IDENTIFICATION LOGIC**

Verified by the Company Verify sub-orchestrator. Raw intelligence confirmed an anomaly in company verify metadata.

**SOURCE TYPE**

OSINT Public Intelligence

STRATEGIC REMEDIATION

```
{
  "company_name": "google",
  "domain": null,
  "verification_results": {
    "registries": {
      "company_name": "google",
      "company_number": null,
      "registered": false,
      "registries_checked": [],
      "found_in": [],
      "registration_details": {},
      "country_risk": 0,
      "risk_score": 50,
      "warnings": [
        "Company not found in business registries"
      ]...
    }
  }
}
```

05. STRATEGIC GUIDANCE SUMMARY

Based on the identified threat landscape, the primary strategic recommendation is a immediate hardening of the url infrastructure. Focus on resolving misconfigured email security records and verifying the identity of external recruiters.

- **Missing DKIM - email authenticity cannot be verified:**
- **No social media presence found:**
- **SPF issue: None:**
- **Minimal social media presence - unusual for legitimate company:**
- **Company not found in business registries:**
- **Domain uses catch-all email - accepts any address:**
- **DMARC issue: None:**
- **Suspicious subdomains found: admin.google.com:**

- No SSL certificate - modern job sites require HTTPS:
- No LinkedIn company page found:

## 06. TECHNICAL AUDIT LOG

```
[RECON] Initializing connection to job-recruitment module...  
[AUTH] Credentials verified for user_id 4  
[DATA] Retrieving intelligence nodes for target: http://www.google.com  
[SYNC] Aggregating 10 security findings...  
[COMP] Synthesis finalized at 2026-05-29T10:21:22.197Z
```
