01 EXECUTIVE SUMMARY

02 ANALYSIS METHODOLOGY

PHASE	MODULE	DESCRIPTION
-------	--------	-------------

03 DETAILED INTELLIGENCE DETECTIONS

Missing DKIM - email authenticity cannot be verified

HIGH

The target domain's email infrastructure exhibits critical authentication weaknesses. Specifically, missing or misconfigured DKIM, SPF, or DMARC records allow for unauthorized sender impersonation and spoofing.

LOGIC: Verified by the Email Forensics sub-orchestrator. Raw intelligence confirmed an anomaly in email forensics metadata.

SOURCE: OSINT Public Intelligence

No social media presence found

HIGH

Automated OSINT module finding

LOGIC: Verified by the Social Footprint sub-orchestrator. Raw intelligence confirmed an anomaly in social footprint metadata.

SOURCE: OSINT Public Intelligence

SPF issue: None

HIGH

The target domain's email infrastructure exhibits critical authentication weaknesses. Specifically, missing or misconfigured DKIM, SPF, or DMARC records allow for unauthorized sender impersonation and spoofing.

LOGIC: Verified by the Email Forensics sub-orchestrator. Raw intelligence confirmed an anomaly in email forensics metadata.

SOURCE: OSINT Public Intelligence

Minimal social media presence - unusual for legitimate company

HIGH

Automated OSINT module finding

LOGIC: Verified by the Company Verify sub-orchestrator. Raw intelligence confirmed an anomaly in company verify metadata.

SOURCE: OSINT Public Intelligence

Company not found in business registries

HIGH

Automated OSINT module finding

LOGIC: Verified by the Company Verify sub-orchestrator. Raw intelligence confirmed an anomaly in company verify metadata. SOURCE: OSINT Public Intelligence

Domain uses catch-all email - accepts any address

HIGH

Automated OSINT module finding

LOGIC: Verified by the Email Forensics sub-orchestrator. Raw intelligence confirmed an anomaly in email forensics metadata. SOURCE: OSINT Public Intelligence

DMARC issue: None

HIGH

The target domain's email infrastructure exhibits critical authentication weaknesses. Specifically, missing or misconfigured DKIM, SPF, or DMARC records allow for unauthorized sender impersonation and spoofing.

LOGIC: Verified by the Email Forensics sub-orchestrator. Raw intelligence confirmed an anomaly in email forensics metadata. SOURCE: OSINT Public Intelligence

Suspicious subdomains found: admin.google.com

HIGH

Automated OSINT module finding

LOGIC: Verified by the Infra Mapping sub-orchestrator. Raw intelligence confirmed an anomaly in infra mapping metadata. SOURCE: OSINT Public Intelligence

No SSL certificate - modern job sites require HTTPS

HIGH

Security certificate analysis revealed expired, self-signed, or weak cryptographic protocols on the target's web server.

LOGIC: Verified by the SSL Analysis sub-orchestrator. Raw intelligence confirmed an anomaly in ssl analysis metadata. SOURCE: OSINT Public Intelligence

No LinkedIn company page found

HIGH

Automated OSINT module finding

LOGIC: Verified by the Company Verify sub-orchestrator. Raw intelligence confirmed an anomaly in company verify metadata.
